SEO AUDIT

SEO Audit: What is blocking organic growth — and the 90-day fix

Technical SEO, on-page, content, architecture, UX, Core Web Vitals, indexing, backlinks and local SEO — prioritised for a technical team and readable for business stakeholders.

7
P0 critical issues
Fix in days, not months

8
Public pages audited
/, /features, /pricing, /faq, /contact, /demo + auth

90 days
Roadmap to indexable, shareable, rankable

Evidence base: live crawl of https://tidy-pro.vercel.app, October 2026 (re-verified 9 Oct 2026, 03:30 UTC). Server checks, HTML inventory and SERP review. No Search Console, CrUX or paid backlink data was available — see Methodology for what that limits.

Prepared as: 15-year SEO engineer review. Audience: founder, product, engineering.

How to read this audit

Start here if you are the founder: read the Executive Summary (p.2) and the 30-60-90 plan (p.11). That is the business case in 5 minutes.

Start here if you are engineering: read the Prioritised Issue Register (p.10) and Appendix B. Every P0 has a Next.js-specific fix pattern.

P0
Critical — blocks indexing, understanding or sharing. Fix first.

P1
High — caps rankings, clicks or trust. Fix in 30 days.

P2
Medium — competitive edge. Fix in 60-90 days.

Impact
Estimated organic impact if fixed, assuming content follows.

Methodology and scope

Area	What was checked live	Source
Technical SEO	Status codes, /sitemap.xml, /robots.txt, canonicals, meta, headers, HTML weight, TTFB	curl + HTML parse, 9 Oct 2026
On-page	Title, description, H1-H3, keyword use, internal links — 8 URLs	Live HTML inventory
Indexing	Crawlability signals, SSR/PPR HTML presence, robots directives	Raw HTML (content present)
Performance	HTML size, server response, mobile 390px layout check	Lab / observed only
Competitors	SERP for "cleaning business software" and Jobber / Housecall Pro comparisons	Web SERP, Oct 2026

> **What cannot be observed without access — stated plainly:** Core Web Vitals *field* data (LCP/INP/CLS at p75), indexed-page counts, impressions/clicks, crawl errors, and the true backlink profile require Google Search Console, CrUX/PageSpeed Insights field data, and a link index (Ahrefs / Semrush / Majestic). This audit flags those as **Unknown — instrument first** rather than guessing. Recommendations include the exact tooling to close each gap.

Site snapshot — verified facts

URL	Title (as rendered)	H1	Canonical / OG / Schema
/	TidyPro — Operations software for cleaning businesses	1 GARBLED	None / None / None
/features	Features | TidyPro	1 clean	None / None / None
/pricing	Pricing | TidyPro	1 clean	None / None / None
/faq	FAQ | TidyPro	1 clean	None / None / None
/contact	Contact | TidyPro	1 clean	None / None / None
/demo	Start your free trial | TidyPro	0	None / None / None

All pages: zero JSON-LD, zero Open Graph / Twitter Cards, zero <img> tags (SVG/CSS only), no sitemap, no robots.txt. Security headers are strong (HSTS, CSP, X-Frame-Options) — a genuine positive.

Executive summary

TidyPro's product story is clear and the site engineering is modern — Next.js with server-rendered HTML, good security headers, clean mobile layout. **Organic search cannot reward any of that yet, because the discovery layer is missing.** There is no sitemap, no robots.txt, no canonicals, no structured data, and no social meta. The homepage H1 — the single strongest on-page signal — reads as concatenated rotating phrases with no spaces. Google can crawl the pages, but it has almost no help deciding what they are about, which URL is canonical, or why they deserve to rank over Jobber, Housecall Pro or ZenMaid.

Technical SEO — 3/10

SSR HTML is present (good). Sitemap, robots, canonicals, schema all missing.

On-page — 4/10

Titles/descriptions exist but are generic, not keyword- or geo-led. H1 defect on / and /demo.

Content — 4/10

Benefit-led and readable, but thin, no content hub, no comparison or guide depth to capture demand.

Local SEO — 2/10

Upstate NY positioning is in copy only — no geo pages, no entity signals, no local schema.

Executive summary — the 7 P0 issues

The 7 P0 issues (all fixable in under a week of dev time)

#	Issue	Why it matters	Impact
1	**Homepage H1 garbled** — rotating variants concatenated: "Run your cleaning businessthat follows up for you.from one tidy place..."	Crawlers and screen readers read nonsense; topical relevance is diluted	P0 HIGH
2	**No XML sitemap** — /sitemap.xml returns 404	Discovery depends on links alone; new pages are found slowly	P0 HIGH
3	**No robots.txt** — returns 404 page HTML	No crawl directives, no sitemap pointer; wasted crawl checks	P0 HIGH
4	**No canonical tags** on any page	Duplicate / parameter risk, split ranking signals	P0 HIGH
5	**/demo has zero H1**	Trial page has no topical heading; weakest landing experience for paid/social landings	P0 MED
6	**Zero JSON-LD** anywhere	No eligibility for FAQ rich results, no entity / software understanding	P0 HIGH
7	**No OG / Twitter Cards**	Every share, Slack paste and LinkedIn post renders bare — kills referral CTR	P0 MED

The opportunity in one line: competitors rank with comparison pages, alternative pages and guides (e.g. "Jobber vs Housecall Pro", "best cleaning business software"). TidyPro already owns a sharp differentiator — flat pricing and built-in quote follow-up — but has no indexable pages that say so where buyers search.

1 Technical SEO

What is working

- **Content is in the initial HTML.** Next.js cacheComponents + partial prerendering means crawlers do not depend on JavaScript execution. This is the right architecture — protect it.
- **Security headers are exemplary** (HSTS 1yr, CSP with allowlists, X-Content-Type-Options, Referrer-Policy). Not a ranking factor directly, but trust and enterprise-readiness.
- **HTTPS, clean status codes** on core pages (200), fonts preloaded, Vercel edge cache HIT.

What is broken or missing

Check	Observed	Fix	Priority
Sitemap	404 /sitemap.xml	Add `app/sitemap.ts` listing all public URLs; submit in Search Console	P0
Robots	404 HTML /robots.txt	Add `app/robots.ts`: allow /, disallow /dashboard /studio /api /p/, point to sitemap	P0
Canonicals	MISSING all pages	`metadataBase` + `alternates.canonical` per route; self-referencing	P0
Meta robots	None set (defaults indexable)	Explicit `noindex` on /signin /signup /demo thank-you /dashboard /studio /p/*	P1
404 handling	Custom 404 exists (good)	Ensure 404 returns HTTP 404 (verified pattern) and is excluded from sitemap	OK
HTML weight	Home ~223 KB, ~0.58s TTFB, ~0.80s total (lab curl)	Audit RSC payload, defer tour JS, keep LCP element as static HTML	P1
URL structure	Clean, flat, lowercase — good	Keep; add /compare/ /alternatives/ /guides/ namespaces, no redesign needed	OK

Why each matters

Sitemap + robots are how you tell Google the site exists as a system, not as scattered URLs found by chance. Without them, every new guide or comparison page you publish waits to be discovered through links. **Canonicals** consolidate signals when the same content is reachable via tracking parameters, www/non-www or trailing-slash variants — cheap insurance that costs one line per template. **noindex on app/auth surfaces** keeps thin, private or duplicate pages out of the index so crawl budget and quality signals concentrate on marketing pages.

> **Implementation note (Next.js):** `app/sitemap.ts` and `app/robots.ts` are file conventions — no dependency needed. Set `metadataBase: new URL('https://tidy-pro.vercel.app')` once in the root layout, then every page's `alternates.canonical` resolves correctly. See Appendix B for copy-ready patterns.

2 Indexing and crawlability

Current state: **crawlable but not guided.** A crawler following links from the homepage can reach /features, /pricing, /faq, /contact and /demo — the nav and footer expose them. Nothing actively blocks indexing. The problem is absence, not blockage.

Signal	State	Risk
Discovery path	Internal links only; no sitemap	Slow discovery of new content; orphan risk as site grows
Crawl directives	No robots.txt; no meta robots	App routes (/dashboard, /studio, /p/[token]) may be crawled and discovered
Index bloat risk	Auth and portal routes return pages	Thin/private URLs in index if ever linked; privacy perception risk
Rendering	SSR/PPR HTML contains copy	Low — keep marketing copy server-rendered; avoid client-only H1s

Recommendations

1. **Ship sitemap + robots together (Day 1-3).** Sitemap lists only indexable marketing URLs (/, /features, /pricing, /faq, /contact, /demo). Robots disallows /dashboard, /studio, /api, /p/, /signin, /signup and references the sitemap URL.
2. **Add** `noindex, nofollow` metadata to auth, dashboard, studio and customer-portal layouts as defence in depth (robots disallow alone does not guarantee de-indexing if a URL is linked externally).
3. **Set up Google Search Console + Bing Webmaster Tools** on day one, submit the sitemap, and use URL Inspection to confirm the homepage H1 fix is picked up. Without GSC you are blind to index coverage — this is the highest-leverage non-code action in the audit.
4. **Keep a crawl log habit:** monthly GSC Coverage review; any "Discovered — currently not indexed" growth after content launches means internal linking or quality needs work, not more pages.

3 On-page optimisation

Page	Title today	Problem	Suggested direction
/	TidyPro — Operations software for cleaning businesses	Primary keyword not front-loaded; no value prop / geo	"Cleaning Business Software for Scheduling, Quotes & Invoicing | TidyPro"
/features	Features | TidyPro	Generic; wastes the highest-intent page	"Cleaning Business Software Features — Scheduling, Quotes & Crew Tools | TidyPro"
/pricing	Pricing | TidyPro	No price / flat-pricing hook	"Pricing — Flat Plans from $49/mo, No Per-User Fees | TidyPro"
/faq	FAQ | TidyPro	Fine, but no schema to win rich results	Keep title; add FAQPage JSON-LD (see §4)
/contact	Contact | TidyPro	Low value; fine as-is	"Contact TidyPro — Talk to Us About Cleaning Business Software"
/demo	Start your free trial | TidyPro (37-char description)	**No H1**; description too thin to sell the click	Add H1 "Start your free 14-day trial"; expand description to ~150 chars with proof

Heading structure: homepage has 6 H2 / 14 H3 — reasonable hierarchy, but headings are benefit-led ("Everything a cleaning business needs") with almost no exact-match phrases buyers type ("cleaning business software", "maid service scheduling software", "cleaning company invoicing"). Keep the voice; weave one primary phrase per page into the H1 and first H2. **Fix the homepage H1 first:** render a single static H1 (e.g. "Cleaning business software that follows up for you") and move the rotating lines into a non-heading element (`p` / `span` with `aria-hidden` rotation). Crawlers, screen readers and the SERP snippet all read the H1.

4 Structured data and SERP features

Observed: **zero JSON-LD on every page.** That means zero eligibility for FAQ rich results, no explicit entity for Google to connect to TidyPro the company, and no software signals (category, price, rating) that competitors can surface.

Schema	Where	What it unlocks	Priority
Organization	Sitewide (layout)	Entity understanding, logo, sameAs links	P0
SoftwareApplication	/ and /pricing	Category, offers ($49-$199), application type in results	P0
FAQPage	/faq + homepage FAQ block	Expandable FAQ rich results; more SERP real estate	P0
BreadcrumbList	All subpages	Breadcrumb display instead of raw URL; architecture signal	P1
WebSite	Homepage	Sitelinks search box eligibility	P2

> **Do not add AggregateRating until you have real, verifiable reviews.** The six homepage testimonials are sample/fictional content. Marking them up as ratings, or leaving fictional quotes presented as real, creates a trust and policy risk that outweighs any SEO gain. Replace with real pilot reviews first, then add review schema.

5 Content quality

The copy is genuinely good at the sentence level: specific, benefit-led, differentiated (flat pricing, quote follow-up). The gap is **depth and coverage**, not tone.

- **Thin topical coverage:** 5 marketing pages cannot rank for the dozens of phrases buyers use ("maid service software", "cleaning scheduling app", "how to price a house cleaning job"). Each needs a home.
- **No content hub:** no blog, guides, templates or calculators — the assets that earn links and top-of-funnel traffic in this category.
- **E-E-A-T signals are weak:** no About/company story, no founder, no address/region entity, no real customer proof, no review presence. For a SaaS asking for payment details, that is a conversion issue as well as an SEO one.
- **FAQ is an asset, unused:** the /faq answers are well written but unstructured for search and not expanded with the long-tail questions owners actually Google.

Content recommendations

Action	Detail	Impact
Fix trust proof	Label sample testimonials as illustrative or replace with 2-3 real pilot quotes (name, city, permission)	P1 TRUST
Expand FAQ	Target long-tail: cost, migration from Jobber, per-user pricing traps, tax, offline mode	P1
Launch guides hub	/guides/ — 4 cornerstone guides (see §11) before any volume blogging	P1 HIGH
Add About	/about — who built TidyPro, Upstate NY roots, why cleaning-first; feeds Organization schema	P2

6 Site architecture and internal linking

Current architecture is a flat 5-page marketing site. That is fine at this size — the problem is it cannot grow. The footer exposes only 6 links (contact, demo, faq, features, pricing, signin); there are no breadcrumbs, no contextual cross-links between features/pricing/faq beyond CTA buttons, and no hub pages to accumulate authority.

Target architecture

```
/                              Cleaning business software (pillar)
/features                      Feature hub
  /features/scheduling         (as depth allows)
/pricing
/compare/tidypro-vs-jobber
/compare/tidypro-vs-housecall-pro
/alternatives/jobber-alternative
/guides/                       Content hub
  /guides/how-to-price-house-cleaning
  /guides/cleaning-business-scheduling-guide
/locations/upstate-ny          Geo hub (see §8)
/faq  /about  /contact  /demo
```

Internal linking rules to adopt: every new page links to one pillar and one conversion page; homepage features section links to /features anchors; guides link into /features and /pricing with descriptive anchors ("flat pricing plans", not "click here"); add breadcrumbs on all subpages with BreadcrumbList schema. This is how a small site passes authority to money pages without a link-building budget.

7 UX, mobile and Core Web Vitals

Signal	Observed (lab)	Field data	Verdict
Mobile layout (390px)	No overflow, clean layout (verified)	—	PASS
Homepage HTML	~223 KB, TTFB ~0.58s, total ~0.80s (curl, warm cache)	Unknown	WATCH
Pricing HTML	~136 KB, TTFB ~0.58s	Unknown	WATCH
LCP / INP / CLS (p75)	Not measurable from crawl	UNKNOWN	Instrument
Images	Zero <img>; SVG/CSS only — no CLS from images, nothing to optimise	—	PASS
Touch / tap targets	44px targets addressed in recent polish (checklists, toggles)	—	PASS

Do not report Core Web Vitals as passing or failing — you do not have field data yet. What to do instead: (1) run PageSpeed Insights on /, /pricing, /features and record lab LCP/INP/CLS; (2) connect Search Console's Core Web Vitals report for p75 field data once traffic exists; (3) treat the animated hero tour as the prime LCP/CLS suspect — ensure its container has a fixed aspect ratio, the H1 is static HTML, and tour JS is deferred until after first paint. UX otherwise is a strength: clear CTAs, consistent trial offer, mobile parity.

8 Local SEO

TidyPro's positioning — "Built for Upstate New York cleaning businesses… expanding to more states soon" — is currently copy-only. There are no geo-targeted pages, no local entity signals, and no presence in the places Google checks for regional relevance. For a SaaS this is not about a map pin; it is about owning the regional long-tail competitors ignore.

Signal	State	Action	Priority
Geo keywords in titles/H1	NONE (no Upstate NY, Albany, Syracuse)	Add regional phrasing to homepage subhead + a dedicated /locations/upstate-ny page	P1
Location pages	None	One honest hub page (cities served, ET scheduling, USD) — do **not** spin thin per-city clones	P1
Organization schema with areaServed	Missing	Add Organization + areaServed (Upstate NY) with the §4 schema work	P1
Google Business Profile	Unknown / likely none (SaaS, may be ineligible without a physical location)	Only if there is a real staffed address; otherwise skip — do not create a fake listing	P2
Local proof	Testimonials name Albany, Syracuse, Rochester etc.	Replace with real customers; regional proof is the strongest local signal a SaaS can earn	P1

Local recommendation in one line: one strong regional hub + real regional proof beats twenty thin city pages, every time.

9 Backlink profile

> **Status: Unknown — cannot be observed from a crawl.** No Ahrefs/Semrush/Majestic data was available, and none is invented here. A new Vercel subdomain site should be assumed to have a near-zero referring-domain count until measured.

What to do: (1) run a free-tier check in Ahrefs Webmaster Tools / Bing Webmaster Tools and record referring domains, top anchors and lost/new links; (2) ensure the eventual production domain (not only vercel.app) is the canonical host — links to a vercel.app subdomain do not build the brand domain's authority; (3) earn the first links from assets competitors already earn links with: the pricing comparison pages, a free cleaning-price calculator or template, and pilot-customer case studies; (4) pursue directory presence where buyers actually compare (Capterra, G2, GetApp) once real reviews exist. Do not buy links; in this category, comparison and guide assets are the link strategy.

10 Competitor and SERP insights

The SERP for "cleaning business software" is dominated by generalist field-service brands (Jobber, Housecall Pro) and cleaning-specific players (ZenMaid and peers), plus comparison content ("Jobber vs Housecall Pro", "best CRM for cleaning businesses 2026", "best Jobber alternatives"). Three patterns matter for TidyPro:

- **Comparison/alternative pages rank.** Third parties publish head-to-head pricing tables (starting prices, per-user fees, add-on traps). TidyPro's flat-pricing story is exactly what those pages discuss — without its own /compare/ pages, TidyPro is absent from the conversation.
- **Pricing transparency wins clicks.** Competitors publish $/user and hide true cost in tiers; TidyPro publishes flat $49/$99/$199. That contrast is a SERP snippet and a page.
- **Cleaning-specific beats generalist on intent.** ZenMaid-style positioning (maid-service workflows, recurring routes) shows buyers search by trade, not by "field service". TidyPro's "made for cleaners, not plumbers" line is a ranking angle, not just copy.

11 Keyword and content opportunities

Keyword volumes below are directional (category knowledge + SERP presence), not pulled from a keyword tool — validate in Ahrefs/SEMrush or GSC before committing. Clusters are ordered by buyer intent.

Cluster	Example phrases	Target page	Intent / priority
Core product	cleaning business software; maid service software; cleaning company scheduling software	/ (H1 + title)	Transactional P0
Comparison	TidyPro vs Jobber; Jobber alternative for cleaning companies; Housecall Pro alternative	/compare/*, /alternatives/*	Transactional P1 HIGH
Pricing pain	cleaning software without per-user fees; Jobber pricing too expensive	/pricing + compare pages	Transactional P1
How-to guides	how to price a house cleaning job; cleaning business scheduling guide; quote follow-up template	/guides/*	Informational P1
Regional	cleaning business software New York; maid service software Upstate NY	/locations/upstate-ny	Transactional P1
Long-tail FAQ	how to reduce cleaning no-shows; cleaning invoice template; recurring cleaning schedule	/faq expansion + guides	Informational P2

First four cornerstone assets (write these before any blog cadence)

1. **TidyPro vs Jobber for cleaning companies** — honest table (users, true cost at 5/10 crew, quote follow-up, cleaning-specific workflows). This is the highest-intent page TidyPro does not have.
2. **How to price a house cleaning job (with calculator logic)** — the guide every owner Googles; embed the pricing factors TidyPro already encodes (service, size, frequency, add-ons).
3. **The quote follow-up playbook** — templates + timing; productises TidyPro's differentiator into search demand.
4. **Cleaning business software buyer's guide** — what to check (per-user traps, add-ons, portal, mobile for cleaners); naturally ranks and links to /compare/.

12 Prioritised issue register

#	Issue	Impact	Effort	Priority
1	Homepage H1 garbled (rotating variants in H1)	High — relevance + a11y	S — hours	P0
2	No sitemap.xml	High — discovery	S	P0
3	No robots.txt	High — crawl guidance	S	P0
4	No canonicals	High — signal consolidation	S	P0
5	No JSON-LD (Org / Software / FAQ)	High — rich results	S-M	P0
6	No OG / Twitter meta + no OG image	Med — referral CTR	S	P0
7	/demo zero H1, thin description	Med — landing quality	S	P0
8	Titles not keyword-led; no geo	High — rankings/CTR	S	P1
9	App/auth routes not noindexed	Med — index hygiene	S	P1
10	No breadcrumbs / thin internal linking	Med — architecture	M	P1
11	No comparison / alternative pages	High — missed demand	M	P1
12	No guides hub / content depth	High — top-of-funnel	L (ongoing)	P1
13	Sample testimonials as social proof	Med — trust/policy risk	M (needs real users)	P1
14	No local hub / areaServed	Med — regional long-tail	M	P2
15	CWV field data unknown	Unknown — instrument	S	P2
16	Production domain vs vercel.app	High — brand authority	M (ops)	P1

13 30-60-90 day action plan

DAYS 1-30

Make the site discoverable and understandable

Week	Actions	Owner	Done when
1	Fix homepage H1 (single static H1); add /demo H1; ship app/sitemap.ts + app/robots.ts; metadataBase + canonicals; noindex app/auth layouts	Eng	GSC URL Inspection shows clean H1; /sitemap.xml 200
1	Create Search Console + Bing Webmaster; submit sitemap; PageSpeed baseline on 3 pages	Founder	GSC property verified; baseline recorded
2	JSON-LD: Organization, SoftwareApplication, FAQPage, BreadcrumbList; validate in Rich Results Test	Eng	FAQ eligible; no schema errors
2	OG/Twitter meta + designed OG image (1200x630); rewrite titles/descriptions per §3	Eng + Design	Shares render with image + hook
3-4	Breadcrumbs + internal linking pass; expand /faq long-tail; label or replace sample testimonials	Content	Every subpage has breadcrumb + 2 contextual links

Expected impact by day 30: full indexation of marketing pages, FAQ rich-result eligibility, shareable links, clean SERP titles. Rankings move on brand + long-tail first.

DAYS 31-60 Capture buyer demand competitors own

Actions	Owner	Done when
Publish /compare/tidypro-vs-jobber and /alternatives/jobber-alternative (honest, sourced pricing)	Content + Founder	Indexed; linked from homepage proof cards + /pricing
Publish /locations/upstate-ny hub with areaServed schema	Content	Regional phrases in title/H1; linked in footer
Guides hub + first 2 cornerstones (pricing guide, quote follow-up playbook)	Content	Each guide links to /features + /demo
Capterra / G2 / GetApp listings (once 2-3 real reviews exist)	Founder	Listings live; review asks to pilot users
Decide production domain; 301 vercel.app to it if it becomes canonical	Ops	One canonical host everywhere

DAYS 61-90 Build authority and measure

Actions	Owner	Done when
Second comparison (Housecall Pro) + buyer's guide cornerstone	Content	Compare cluster internally linked as a set
Real pilot case study (named company, city, metrics) replacing sample proof	Founder	Review schema added only now, with real ratings
Backlink baseline in Ahrefs Webmaster Tools; outreach for guide/calculator links	Founder	Referring-domain baseline + target list
GSC review: impressions, CTR by page, CWV field report; iterate titles on low-CTR pages	SEO	90-day retro with next-quarter plan

> **What success looks like at day 90:** all marketing pages indexed with rich-result eligibility, comparison pages capturing high-intent searches, first organic trial signups attributable in GSC/analytics — not a traffic promise, a measurability promise.

Appendix A Page inventory (verified 9 Oct 2026)

URL	Title length / Description	H1 / H2 / H3	HTML
/	"TidyPro — Operations software for cleaning businesses" / 139 chars	1 garbled / 6 / 14	~223 KB
/features	"Features | TidyPro" / 150 chars	1 / 8 / 5	~116 KB
/pricing	"Pricing | TidyPro" / 129 chars	1 / 3 / 9	~136 KB
/faq	"FAQ | TidyPro" / 107 chars	1 / 4 / 2	~96 KB
/contact	"Contact | TidyPro" / 104 chars	1 / 3 / 3	~70 KB
/demo	"Start your free trial | TidyPro" / 37 chars	**0** / 0 / 1	~18 KB
/signin, /signup	Present	0 / 0 / 1	Needs noindex

All 8 URLs: canonical = missing, OG = missing, JSON-LD = missing, <img> = 0. /sitemap.xml = 404. /robots.txt = 404 (returns 404 page HTML). Method: live curl status/TTFB/size + HTML heading/meta parse, cross-checked with page-text fetch.

Appendix B Implementation patterns (Next.js)

Root layout — metadataBase + defaults

```
export const metadata = {
  metadataBase: new URL('https://tidy-pro.vercel.app'),
  title: { default: 'Cleaning Business Software for Scheduling, Quotes & Invoicing | TidyPro',
           template: '%s | TidyPro' },
  openGraph: { type: 'website', siteName: 'TidyPro',
    images: [{ url: '/og.png', width: 1200, height: 630 }] },
  twitter: { card: 'summary_large_image' },
}
```

app/sitemap.ts (core routes)

```
export default function sitemap() {
  const base = 'https://tidy-pro.vercel.app'
  return ['', '/features', '/pricing', '/faq', '/contact', '/demo']
    .map(p => ({ url: base + p, changeFrequency: 'weekly', priority: p === '' ? 1 : 0.8 }))
}
```

app/robots.ts

```
export default function robots() {
  return { rules: [{ userAgent: '*', allow: '/',
    disallow: ['/dashboard', '/studio', '/api', '/p/', '/signin', '/signup'] }],
    sitemap: 'https://tidy-pro.vercel.app/sitemap.xml' }
}
```

Homepage H1 fix

```
<h1>Cleaning business software that follows up for you</h1>
<p aria-hidden="true">{/* rotating phrases live here, outside the H1 */}</p>
```

FAQPage JSON-LD

```
{ "@context": "https://schema.org", "@type": "FAQPage",
  "mainEntity": [{ "@type": "Question", "name": "...",
    "acceptedAnswer": { "@type": "Answer", "text": "..." } }] }
```

Appendix C Tooling, validation and sources

Set up once, use monthly

Need	Tool	Cost
Index coverage, queries, CWV field data	Google Search Console	Free
Second engine + free link data	Bing Webmaster Tools	Free
Lab performance + CWV	PageSpeed Insights / Lighthouse	Free
Schema validation	Rich Results Test; Schema Markup Validator	Free
Backlinks baseline	Ahrefs Webmaster Tools (own-site tier)	Free tier
Keyword validation	Ahrefs / Semrush (or GSC query data once live)	Paid / free start

Pre-ship SEO checklist (every new page)

- Unique title (primary phrase first) + 140-160 char description
- Exactly one clean H1; H2s carry supporting phrases
- Self-referencing canonical; indexable (not in robots disallow)
- In sitemap; linked from at least 2 existing pages
- Relevant JSON-LD validated; OG image renders
- Mobile 390px check; H1 visible without JS

Sources and evidence

- Live crawl of https://tidy-pro.vercel.app (/, /features, /pricing, /faq, /contact, /demo, /signin, /signup) — status, TTFB, HTML size, title/description/H1-H3/canonical/OG/JSON-LD inventory, 9 Oct 2026.
- Verified finding set supplied for this audit (October 2026 crawl): garbled homepage H1, missing sitemap/robots/canonicals/schema/OG, /demo zero H1, geo-free titles, footer link count, HTML weight, Next.js PPR server-rendered HTML.
- SERP review: "cleaning business software scheduling invoicing" and "Jobber vs Housecall Pro cleaning company software pricing" — competitor/comparison presence (Jobber, Housecall Pro, ZenMaid category), October 2026.

> **Limitations restated:** No Search Console, CrUX or link-index access was available. CWV, index counts and backlinks are marked Unknown with a tooling path — not estimated.

End of audit. Recommended immediate next action: ship the Week-1 P0 batch (H1, sitemap, robots, canonicals, noindex) and verify in Search Console before any content work.
